

## AIRCRAFT DIFFERENCES TRAINING

**James Peplow Flying Services**

### Private Pilots Licence Training

If you are considering buying your own aircraft for your business or pleasure and you need to learn to fly then I can offer instruction which is flexible to suit you and your business.

*I specialise in teaching flying on a one to one basis, giving you the best possible opportunity to move through the syllabus with confidence.*

*You get individual tuition which works around your schedule to suit your business. Full time or part time tuition or you may only have one day per week, whatever your needs, they can be accommodated. I have taught this way for many years with much success.*

*When you have completed the training and been issued a Private Pilot Licence, I can help you gain the experience to take your flying forward safely, to enhance your skills so you can benefit from being an 'owner operator' and make the most of all the advantages that brings for you personally and for your business.*

Training can be done using your own aircraft or the PA28.

*The PA28 Warrior is ideal for PPL training and is also well equipped for continued, advanced training, including the IMC (Instrument Meteorological Conditions) rating and the night rating.*

*Call me! I am happy to discuss your training requirements whether just beginning or advanced.*
